

# Centralised Hot Water

# AQUA connect

## DO YOU THINK...

- Utility services should be accurately measured and billed?
- Water and energy should be fully accounted for?
- Services in your building should be "user pays"?
- Transparency and accountability is important?
- Your hot water bill is too high?

If you tick any of the boxes, then you need AQUA connect.

We are the market leading specialists for utilities in multi-tenanted buildings, having delivered premium electricity solutions since 2005.

We now bring our centre of excellence in metering, billing and customer service to solve the challenge of bulk hot water reticulation.

Typically, a centralised plant or boiler provides the hot water for the entire building as it is too inefficient to have individual hot water units. It is installed by the developer and passed over to the Owners Corporation for on-going management. As part of the installation, water flow meters are attached to the hot water pipework.

WINconnect measures the litres of hot water used by each apartment. The cost of the water is not charged, but the energy used to heat it needs to be recovered on an equitable user-pays basis.

**WINconnect's Centralised Hot Water solutions bring efficiencies that will be a valuable legacy for your Owners Corporation.**

## WE TAKE CARE OF

- ✓ Build, Own, Manage, Operate plant and equipment
- ✓ Meter reading plus testing and accuracy
- ✓ Regulations & Compliance
- ✓ Application of heating factors
- ✓ Bulk energy gas contract for the boiler
- ✓ Customer service billing details and call centre
- ✓ Accounts and collections
- ✓ Scoping alternative green and efficient solutions
